Northhome Comfort Windows

T.&M. T., Leross Windows installed January 22, 2010

Comments 5 years later: “Our Northhome Comfort Windows are quiet compared to our old windows. We like that they don’t frost up in the winter [because the glass is installed to the inside of the room, keeping it warmer]. It’s been 5 years & they look the same as the first day they were put in. We believe it was a good investment. They make our home much warmer in the winter & cooler in summer. And because there is less drafts, our furnace runs less, making them a cost saving measure.”
